TITLE : CLOCK EXTRACTION CIRCUIT

ABSTRACT : PURPOSE: To shorten the time for pulling into synchronism and maintain the stable synchronous state in a digital PLL circuit.

CONSTITUTION: Rise and fall detecting circuits 3 and 4 detect variation points of an input digital signal and a pulse generating circuit 5 generates pulses corresponding to those variation points. A prediction signal generating circuit 6 predicts subsequent variation points of the input digital signal in response to the variation point pulses to generate prediction pulses. A Q-value control circuit 7 latches the prediction pulses at each timing point of the variation point detection pulses and performs high/low-control over the Q value of the PLL circuit 1 with the latch output.
